

## **Method for Operating a Display Device**

### **Abstract**

A method for operating a display device (DD) is proposed. In the proposed method a convenient and reliable perception of displayed display information (DI) is enabled by displaying (S3) display information (DI) using a selected or changed display mode for a display unit (DU) or changed display information (DI), which  
5 are selected (S2) in accordance to user position information (UPI) of a possible user (U) with respect to a display unit (DU) of the display device (DD).
